

## ENVIRONMENTAL AND ENERGY POLICY 2023

In consideration of our mission and vision statement, Environmental Sustainability, and Energy conservation within our management systems (ISO 14001:2015 and 50001:2018 Compliance obligations), we are committed to the following:

1. Applying common environmental and energy management standards, sharing best practices and gradually implementing energy management systems that help reduce energy
2. Complying with environmental and energy management applicable standards and regulations.
3. Developing proactive & harm free culture for preventing occupational environmental pollution, illness, incidents, diseases and or otherwise.
4. Implementing continuous environmental and energy improvement across our Company through systematic performance evaluation.
5. Observing striving global and local environmental and energy efficiency and carbon emission targets and providing the resources needed to achieve them, as could be determined by host countries.
6. Continuously support the improved use of 100% energy from renewable sources especially electricity, while replacing another fossil gas as applicable to the host country
7. Actively engaging with the value chain to encourage progress on its energy commitments and standards to reduce indirect carbon emissions, especially with our suppliers and customers.
8. Communicating this policy and the Company's energy performance, having our performance verified by an external organization.
9. Collaborating with others to achieve a low-carbon economy, e.g. exchanging practices with industry.
10. Promotion greater awareness and commitment to energy consumption and efficiency, including the use of the digital world to promote energy efficiency and the reduction of emissions among employees, partners and customers.
